## AUTENTICATION

Each request made must include client authorisation in the header of the HTTP request. This will use basic HTTP access authentication.

The authorisation header is constructed by combining the "username:password" string and encoding it in Base64. This string is prefixed by the "Authorization: Basic" string.

For example, for the username "myuser" and password "mypass", the resulting header would be: Authorization: Basic bXl1c2VyOm15cGFzcw==

## FORMS MANAGEMENT

### LIST FORMS

URL: <https://dashboard.360nrs.com/api/rest/forms>

METHOD: **GET**
